Jessica: I just listened to your voice message (after I sent the email below). Other than the link to the pdf document that was in the deficiency letter I don't have any other examples to provide you. We don't have any guidelines as to the length of the document that needs to be submitted. I've seen submissions that are just a few pages and ones that are 20+. You'll just want to be sure you hit on all of the key points outlined in the pdf guidance document. I would put your best foot forward in making the argument that there are benefits to having this a.i. registered for food use. You may want to cite what alternatives are out there now and why chlormequat chloride is better from a human health or ecological perspective, or both. In other words, what makes chlormequat chloride unique/special in that it can fit a niche that other chemicals can't or don't do as well. If you want me to set up a quick call for next week with someone in BEAD I'm more than happy to do so. Again, I'm going to be busy the rest of today starting at 2:00 pm and then out tomorrow. But let me know and on Monday I'll see what I can find on the calendar if you want to do the call.

Thanks,  
Heather

Hi Jessica:

The supplier can send this information directly to me. However, they will need to be sure it reaches me by 3/27/19 in order to meet the 10day deficiency letter requirements. After that date, the entire package will be rejected. For your part, you should send me a letter (signed pdf attached to an email is fine) stating that the supplier will be sending this information directly to us within the 10 business days starting 3/13/19.

As far as the benefits information: this is not my area of expertise. While all of the submitted benefits information should be sent to me it is reviewed by BEAD. However, if you have specific questions you can send them to me via email and I can forward them on to BEAD. If your questions are more generic in nature and/or have to do with the public process I am happy to talk with you. I'm available in about 15 minutes if you want to talk. I have a meeting at 2:00 pm and then leave for the day and am out tomorrow. I could also talk on Monday.

Let me know and I'll call you.

Thanks,  
Heather

Hello Heather,

I understand what is needed for the inert ingredient. I have asked the supplier of the **Ex. 4 CBI** to provide their formulation information directly to you. They do not want to send me their confidential information for obvious reasons. Is it okay if they send all requested formulation information directly to you by email?

Regarding the BEAD document, when you have a minute, can you give me a call?

Thanks,  
Jessica

Thanks Jessica. I shared this with my colleague. She stated that she did find the Cas #, but the mixture/trade name is not in the database. They need the full compositional data from the manufacturer which includes the CAS Reg #s, %w/w, etc, and all of the chemical names for all of the ingredients that are in the mixture. They also need the suppliers name for each ingredient in the mixture. If this is not making sense please let me know and I'll put you in touch with the reviewer directly.

Heather

Hi Heather,

Here is a screenshot of what I see on the EPA Inert Finder website:

# Ex. 4 CBI

I believe this shows the ingredient is approved for food use for pre- and post-harvest, and exempt from a tolerance. Please let me know if I've missed something.

Thank you for help.  
Jessica

Hi Jessica: I received your voice message this morning. Please send me an email with the information you left on my voice mail so that I can forward that to the science team that does the inerts review.

Thanks,  
Heather
